QA Engineer

Job ID #: In-TAC-013-16
Sector: IT
Job Type: Full time (1 year contract)
Location: Vancouver, BC
Number of Openings: 1
Salary: DOE (Depending on Experience)
Closing Date: Ongoing until filled

The company is one of the largest software companies headquartered in downtown Vancouver. Their office is located near the waterfront where they have great views and close proximity to public transit, shops and restaurants. They have designed a new office to provide a bright and inspiring work environment with a variety of custom-built spaces so they can collaborate, communicate, and concentrate. They celebrate their wins in large common areas where they hold hackathons, end of quarter celebrations, and monthly socials. The company believes in a good work / life balance which is reflected in their annual employee retreat where it's all about friends and family.

QA Engineer will bring extensive QA and technical expertise to test our Data and Device Security (DDS) product and other business applications developed with the latest technologies from Microsoft and Java. The successful candidate will be responsible for, writing and executing manual and automated test cases and specialized testing covering the one or more areas of: UI, API, security, system performance, database testing, network/protocol analysis, and installation/configuration. In addition to test creation/execution the candidate will be involved in designing and extending the test automation framework.

Responsibilities

- Take an active role in the creation of the project test plan including risk analysis, test strategy, and test scope.
- Provide accurate task estimates and status reports.
- Review Product requirements/specifications and other technical documentation to ensure testability and completeness.
- Develop automated UI and API tests.
- Develop automated functional and performance tests.
- Execute manual and automated tests on Web-based client–server application.
- Execute manual and automated tests on Android, iOS, Windows and Mac Platforms
- Identify and record descriptive defects.
- Collaborate closely with Development, Program Management and Support to analyze and resolve issues.

Qualifications

- 3-5 years of experience testing Enterprise class software in a Client/Server or Web environment with experience in Security, Performance, Database, API and Web testing
- 3-5 years of experience with functional and performance test automation
- Solid test plan and test case writing skills
- Excellent oral and written communication skills
- Strong analytical and problem-solving skills
- Excellent understanding of SDLC and quality processes
- Solid knowledge of TSQL and database technologies.
- Experience with Industry standard test automation, test and defect management tools.
- Intermediate programming skills (Java, C#, or Python)
- Experience with VMWare
- Experience with Selenium
- Experience with Agile Development methodology (Scrum)

- Experience with Soap UI test tool (nice to have)
- Experience with JIRA (nice to have)
- Experience with qTest test management tool (nice to have)
- Experience with Appium (nice to have)
